Kansas Flours Chemical, Baking and Storage Tests Volume 202-214

By Charles Oscar Swanson

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 32 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1915 edition. Excerpt: . . . straight. The solubility of phosphorus increases as the numbers for the percentage grade increases. Not only is there a larger per cent of phosphorus soluble in the poorer commercial grades, but in these grades it is more easily soluble. Thus for the short patent the increase of the percentage of total soluble at the higher temperature and longer time over the lower temperature and shorter time is 12. 81 per cent (33. 64--20. 83), for the long patent the increase is 10. 73 (35. 87--25. 14), and for the straights the increase is 7. 71 per cent. This seems to indicate that the phosphorus in the poorer commercial grades of flour dissolves more rapidly than that in the better commercial grades. That is, the treatment for a shorter time, and at a lower temperature, extracts a relatively larger proportion of the soluble phosphorus in...
