The Prevention Of Summer Diarrhca In Infants. --Dr. L. E. Holt Medical News), emphasizes the following points: 1. Children should not be over-fed at any time, but especially not in summer. 2. At this season, also, every dyspeptic catarrh should be attended to; many of these are promptly curable by merely clearing out the intestine and then cutting down the quantity of food. 3. Should an intestinal catarrh, even a very mild one, continue for two or three weeks, one may be pretty certain that he has something more than a functional disorder to deal with. 4. Every milk catarrh should be looked upon as the possible precursor of a severe type of intestinal disease, either near or remote. 5. In the treatment..
